

BodyTite™

ADVANCED BODY REFINEMENT

Patient **Consultation** Guide

Transform yourself with BodyTite, a breakthrough body remodeling procedure designed to eliminate stubborn fat, smoothen cellulite, while simultaneously re-contouring and firming your body.

What Does BodyTite Treat?

BodyTite™

ADVANCED BODY REFINEMENT

Congratulations on your BodyTite decision!

BodyTite is a revolutionary new procedure designed to eliminate unwanted fatty areas, and reduce cellulite, while firming and toning your body.

The BodyTite targets the following areas of concern:

Body Contouring & Reshaping:

Sculpt areas to obtain a smoother, sleeker and re-contoured appearance of your figure.

Skin Laxity:

Target areas which have become less elastic and may appear saggy or feel loose.

Cellulite:

Reduce the “dimpled” appearance of the skin, commonly found in thighs, stomach and buttock areas, caused by excess fat accumulation.

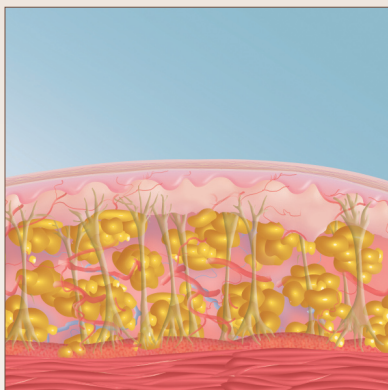

Fat Reduction:

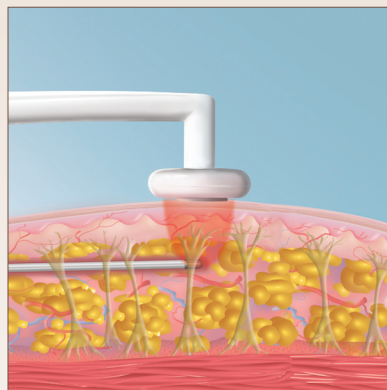

Eliminate excess body fat to sculpt areas for a smoother, sleeker and re-contoured appearance.

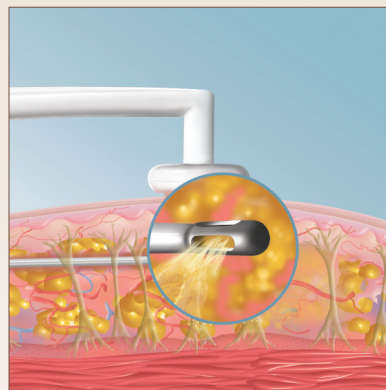

BodyTite uses **Radio Frequency Assisted LipoTightening** technology to gently melt and remove excess fat to achieve body sculpting and firming. RFAL is advanced technology that precisely targets concern areas with higher levels of safety and uniformity than traditional liposuction.

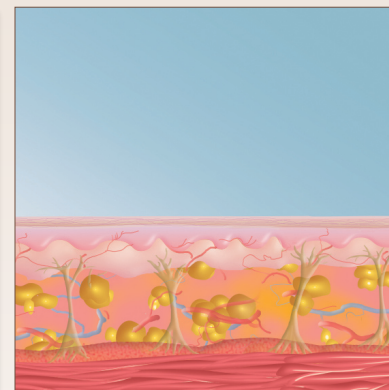

Ideal candidates for BodyTite show enlarged and unwanted fatty tissue.

A cannula is inserted through a tiny incision in an inconspicuous place. Precisely directed high frequency electrical energy is applied to your treatment zone causing the fat to melt and your body to shrink in size.

Pre-treating the fat clusters using RFAL technology produces a gentle fat aspiration and significantly reduces bruising, swelling and pain compared to current lipoplasty procedures. Precisely controlled heat from the RF will stimulate the skin and soft tissue to contract and tighten.

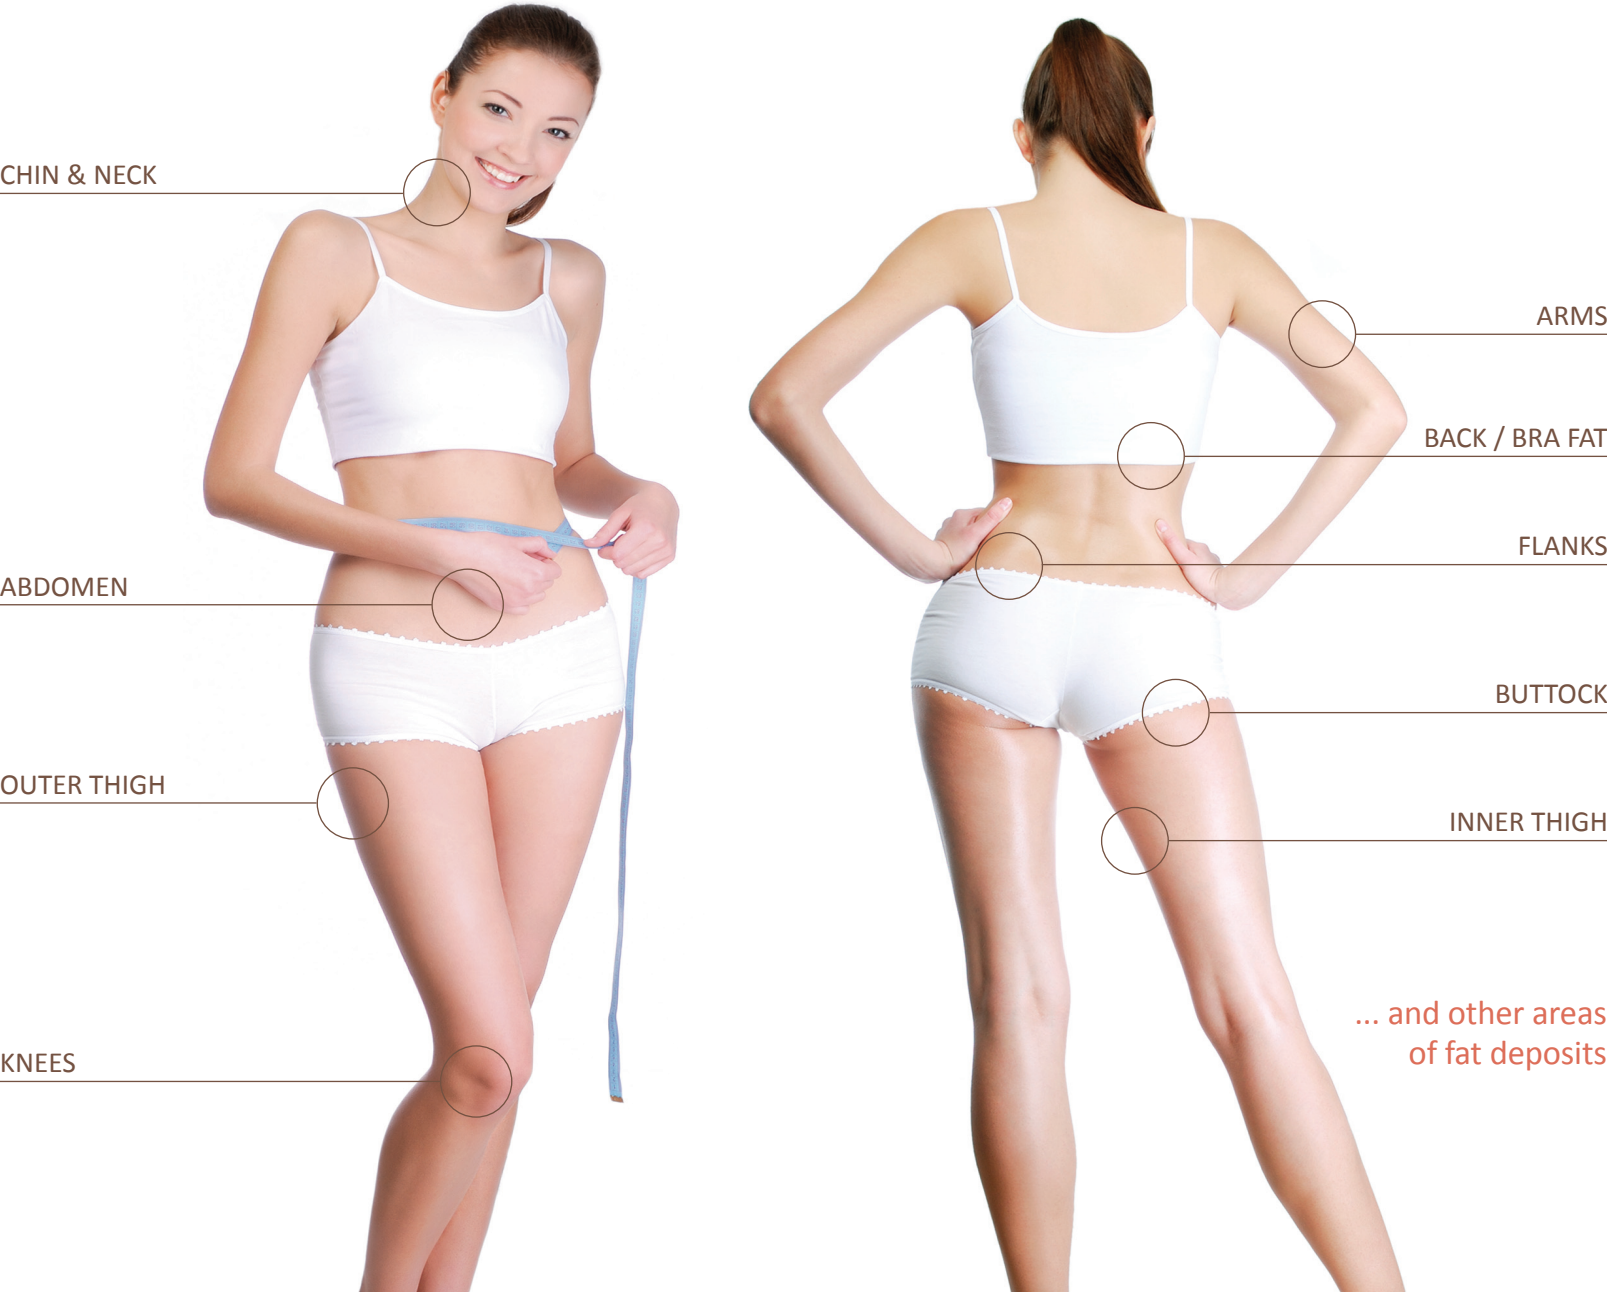

Post-procedure you will discover noticeable body recontouring and firming results.

No extra fat,
but loose skin
in target area

Normal BMI

Local fat
accumulation

Normal BMI

Areas of extra
fat accumulation
with good
skin tone

Normal to
high BMI

High volume of
fat accumulation
with fair skin tone

High BMI

Very high fat
volume with
loose skin

High BMI

Does the Procedure Cause Discomfort?

BodyTite™

ADVANCED BODY REFINEMENT

What to expect during treatment ...

BodyTite is a minimally invasive procedure performed under local anesthesia or light sedation and most patients feel minimal discomfort. Patients can be awake during the procedure, optimizing anesthetic safety, and most do not require overnight stays.

What Can I Expect After the Procedure?

BodyTite™

ADVANCED BODY REFINEMENT

Results:

Most patients will see results immediately, with **best results noticeable after 6-12 weeks**. Results are patient specific and depend on the treatment area and amount of fat removed. Larger areas will require a longer recovery time, however, most patients find the recovery process very tolerable.

Pain, Swelling & Bruising:

Patients may experience minor bruising and numbness immediately after BodyTite but much less than after traditional liposuction. Over the course of the day the numbness will wear off and patients may use prescribed anti-inflammatories or pain medication. Within a few days the swelling will decrease and any minor bruising experienced during treatment will subside.

Patients can return to their regular routine immediately, however, should only resume high impact exercise once the pain and swelling have subsided.

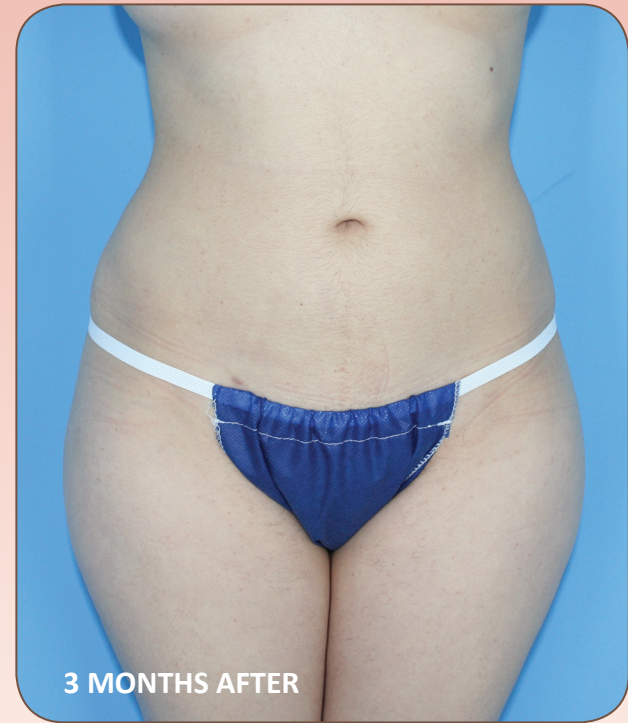

Post-Procedure Care:

Patients can walk out of the treatment room and return home after the BodyTite procedure is completed. Immediately post-procedure, patients will be instructed on how to care for their wounds to ensure proper healing. Depending on the areas treated, patients may be required to wear a contouring compression garments.

To ensure appropriate results, patients should schedule a follow-up visit with their physician within the first two weeks after treatment for proper monitoring of the recovery process.

Dr. Guillermo Blugerman
Dr. Diego Schavelzon

28 year old female with waist circumference reduction of 12 cm (83 to 71 cm),
hip reduction of 4 cm (96 to 92 cm) and weight loss of 11 lbs (133 to 122 lbs)

Dr. Malcolm Paul

Fat reduction and contour changes to abdomen and thighs.

Dr. Guillermo Blugerman
Dr. Diego Schavelzon

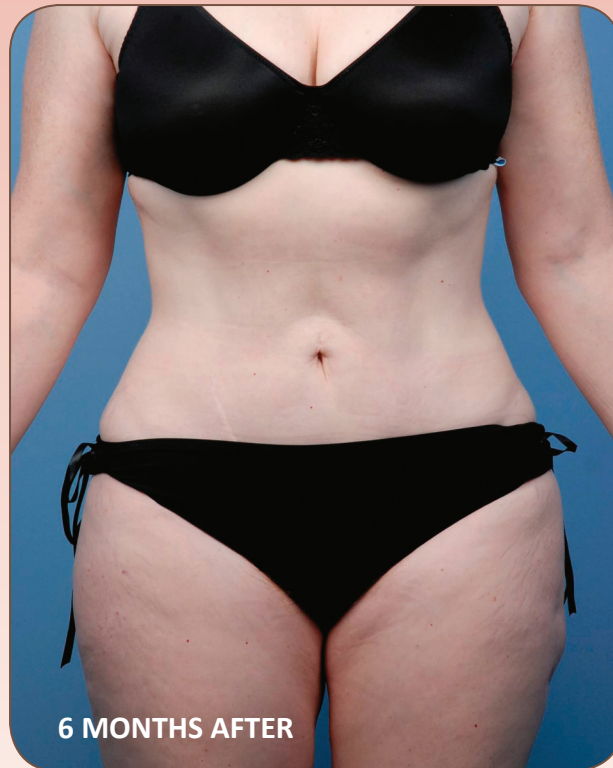

40 year old male with a history of massive excess weight as a teenage demonstrates high levels of skin contraction. Waist circumference reduction of 12 cm (98 to 86 cm), hip reduction of 11 cm and weight loss of 12 lbs.

Dr. Diane Duncan

Female patient had good contour but was mostly concerned with her inner thighs. Post treatment results show completely straight inner thighs and reduction of fat above the knees.

Dr. Stephen Mulholland

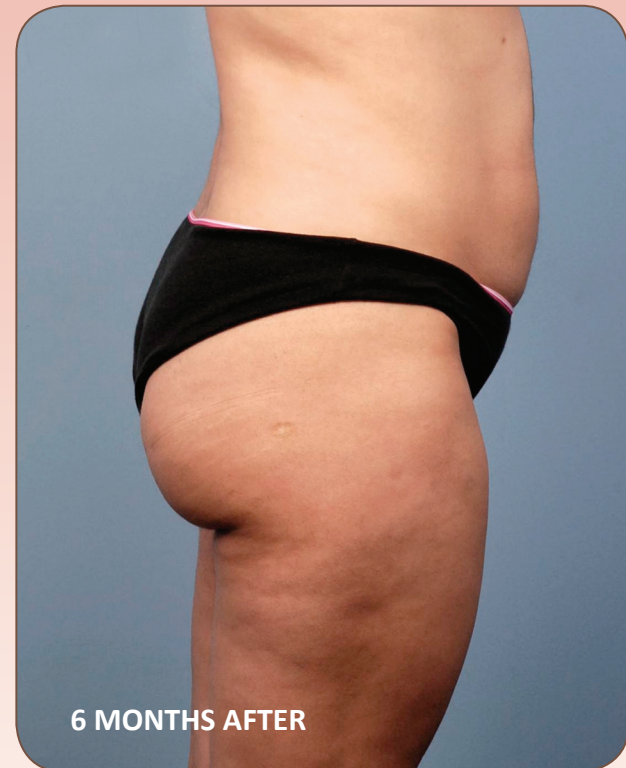

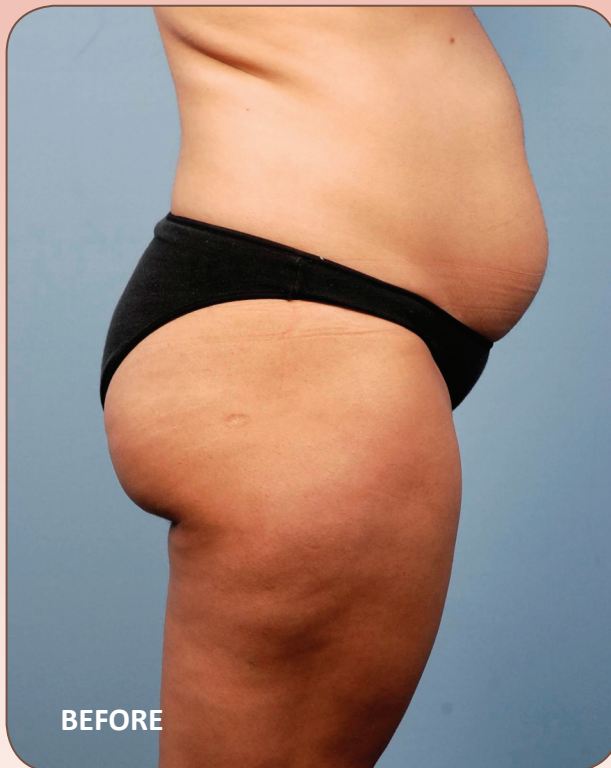

58 year old female with BodyTite treatment on hips, abdomen, outer and inner thighs.
Circumferential reductions of 10 cm on the hips and 8 cm on the thighs, weight loss of 10 lbs.

Dr. Stephen Mulholland

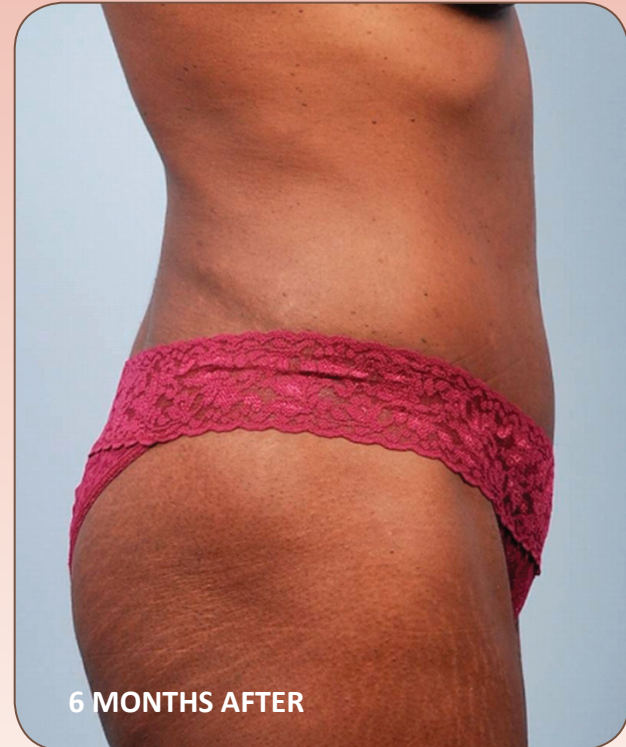

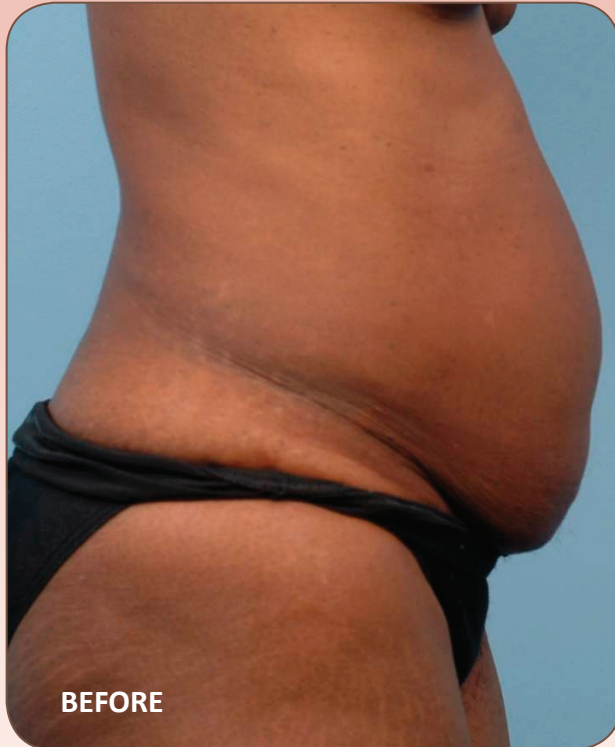

57 year old female with contour and cellulite changes to the inner and outer thighs.

Dr. Stephen Mulholland

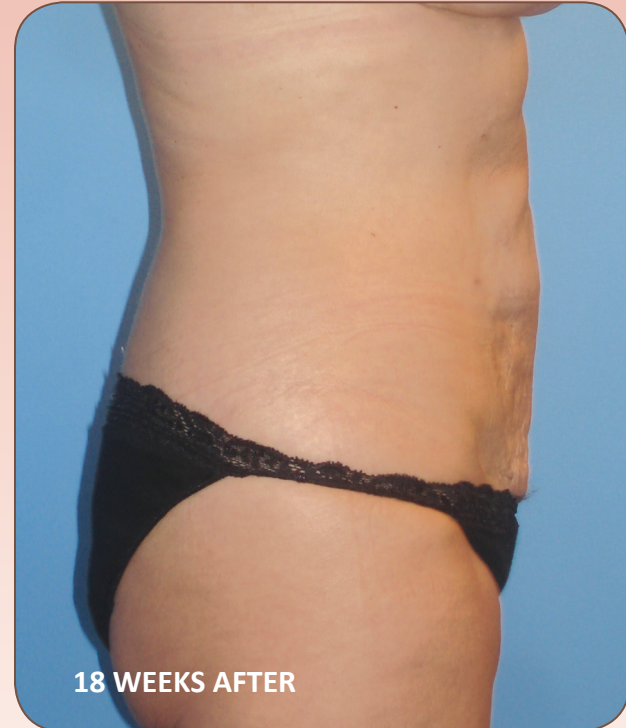

49 year old female with abdomen circumference reduction of 12 cm
and weight reduction from 138 lbs to 129 lbs.

Dr. Stephen Mulholland

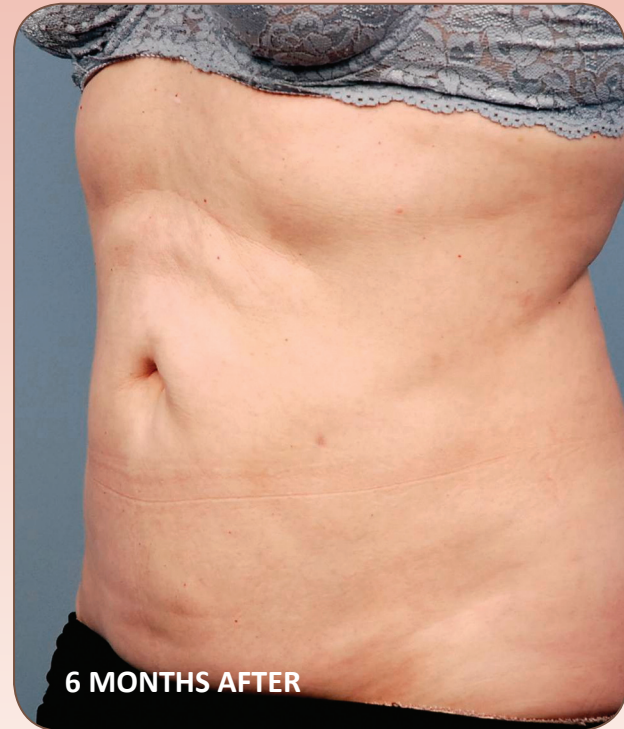

42 year old female with abdomen and hip treatment resulting in abdomen circumference reduction of 12 cm and 21% vertical contraction.

Dr. Dennis Hurwitz

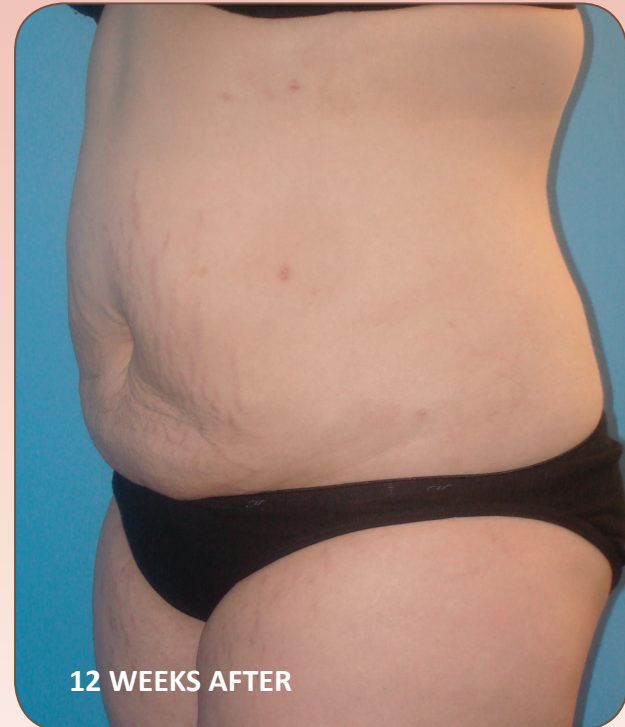

57 year old female with BMI of 27.6 with waist circumferential reduction of 7 cm (84 to 77 cm), thighs reduction of 14 cm (151 cm to 137 cm) and weight reduction of 14 lbs.

Dr. Stephen Mulholland

Fat reduction and body refinement to re-contour,
firm and tone the abdomen area.

Dr. Dennis Hurwitz

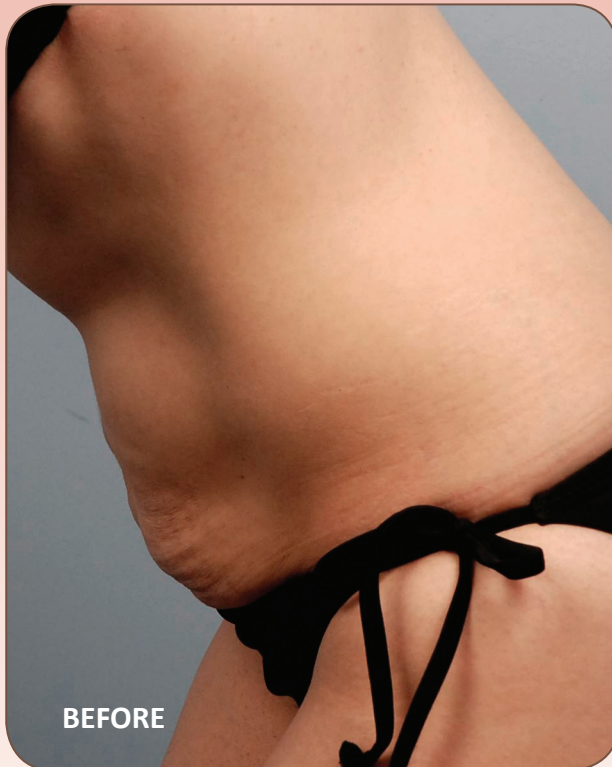

25 year old female with BMI of 39.1 with waist circumferential reduction of 1.5 cm above the umbilicus and weight reduction of 14 lbs.

Dr. Stephen Mulholland

Photography of abdomen at 45 degrees showing significant contraction.

Dr. Stephen Mulholland

Mother of 9 and 4 year old children with focal fat reduction in abdomen area.

Dr. Guillermo Blugerman

52 year old female with significant body contouring in the waist area with waist circumferential reduction of 5 cm (90 cm to 85 cm) and hips reduction of 7 cm (117 cm to 110 cm).

Dr. Dennis Hurwitz

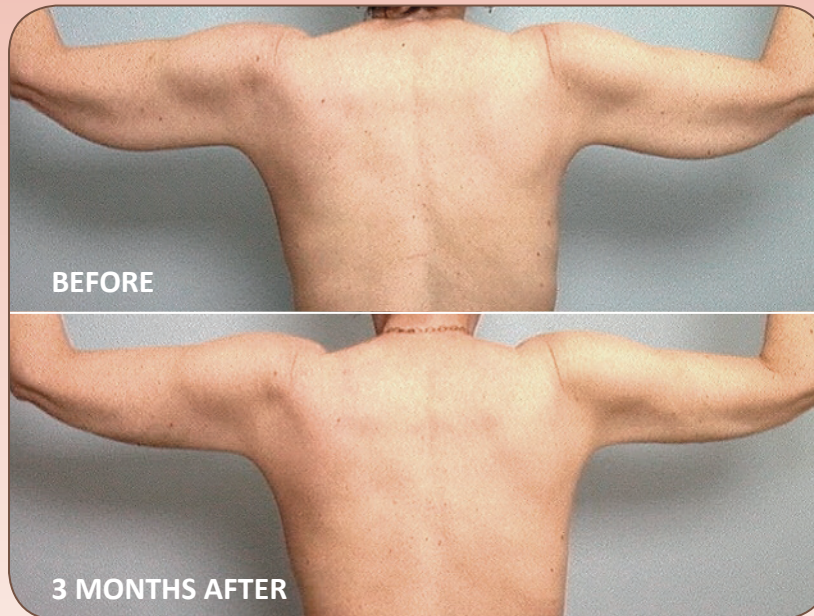

BodyTite plus Mini-abdominoplasty Combination: Mini-abdominoplasty incision on lower abdomen combined with extensive surrounding BodyTite on upper abdomen without transposition of umbilicus. No pain, minimal bruising with quick healing.

Dr. Guillermo Blugerman

BodyTite treatment of a large arm region shows significant skin contraction.

Dr. Diane Duncan

BodyTite is able to achieve focal skin tightening in the trouble spot without distortion or lumpiness.
